

Questions of the Executive

1. To what extent does the use of the technology change the understanding of leadership and decision-making, possibly shifting it from humans toward systems?
2. What risks arise from the use of the technology, and who bears the responsibility for the consequences that result from it?
3. How do we ensure that the use of the technology adequately takes ethical, legal, and social implications (ELSI) into account?
4. How do we address potential tensions among our employees and stakeholders that may arise for social or cultural reasons?

Short Description: Scenario 2

- Automation and AI systems determine work processes, while humans take on tasks that machines cannot reliably perform.
- Everyday working life is characterized by constant adaptation, a fast pace and a competitive atmosphere.
- Leadership is highly data-driven and consists primarily of flexibly assigning people as resources within the systems rhythm.
- The central challenge lies in providing guidance under extreme pressure to be efficient and adapt to change, even though roles, teams and requirements are constantly changing.
