

Questions of the Executive

1. To what extent does the use of the technology change the understanding of leadership and decision-making, possibly shifting it from humans toward systems?
2. What risks arise from the use of the technology, and who bears the responsibility for the consequences that result from it?
3. How do we ensure that the use of the technology adequately takes ethical, legal, and social implications (ELSI) into account?
4. How do we address potential tensions among our employees and stakeholders that may arise for social or cultural reasons?

Short Description: Scenario 1

- Automated systems control work processes, assign tasks, and continuously evaluate employee performance and productivity.
- Constant adaptation, high pressure to perform, and unstable roles characterize a workday that is consistently focused on efficiency.
- Leadership oversees, while the allocation of personnel and tasks increasingly follows automated guidelines.
- Leadership must maintain responsibility and the capacity for human agency, even though systemic guidelines dominate decisions, roles, and work rhythms.
