

Questions of the Executive

1. To what extent does the use of the technology change the understanding of leadership and decision-making, possibly shifting it from humans toward systems?
2. What risks arise from the use of the technology, and who bears the responsibility for the consequences that result from it?
3. How do we ensure that the use of the technology adequately takes ethical, legal, and social implications (ELSI) into account?
4. How do we address potential tensions among our employees and stakeholders that may arise for social or cultural reasons?

Short Description: Scenario 5

- Technologies process large volumes of information, prepare decisions, and independently execute certain responses within predefined boundaries.
- High speed, technological dependence, and constant readiness to decide shape a culture in which trust in systems is as important as critical oversight.
- Leadership defines the boundaries of delegation, intervention rights, and the situations in which human judgement must take precedence over automated decisions.
- Leadership must preserve operational capability under extreme time pressure without losing control, accountability, or the capacity for human intervention.
