

Creating Your Own Technology Cards

Technology Cards define the focus of the discussion. Your download package includes a blank Technology Card template that can be customized for your own use case. To ensure the game runs smoothly, complete the card before the session begins.

- **Title:** Provide a clear and descriptive name for the technology being discussed.
- **Scope:** Define the scope of the technology. Explain exactly what is included and, if necessary, what is intentionally excluded. This supports the participants to share the same understanding of the discussion topic.
- **Situation:** Describe the specific application or use case that will be discussed. Limiting the discussion to a defined context helps prevent participants from drifting into unrelated applications that are not relevant to your organization.
- **Leadership Influence:** Describe the central challenge, dilemma, or problem introduced by the technology. This serves as the starting point for the discussion and should define the issue participants are expected to address.

Creating and Using Your Own Scenarios

Scenarios establish the overall context and societal setting for the discussion. A well-designed scenario helps participants immerse themselves in the situation before they begin exploring the implications of the technology. To create your own scenarios you can use the [AnticipaTech](#) game. When using a preexisting scenario or one you created yourself, use the following guidelines and instructions to prepare it for the use with AnticipaLead.

Requirements for a Good Scenario

When creating and adapting your scenario, keep the following guidelines in mind:

- Introduce the broader context, but do not include the specific problem that participants are expected to solve. The central discussion point should be introduced exclusively through the Technology Card.
- Avoid focusing on specific technologies whenever possible. This prevents conflicts between the scenario and the selected Technology Card.
- Keep the scenario concise and easy to understand. Participants should be able to quickly grasp the situation without becoming overwhelmed by unnecessary detail.

Creating a Scenario Summary for the Nametags

Participants should have easy access to a brief reminder of the scenario throughout the game. We recommend either printing a short summary on the back of the name tags, or asking participants to create the summary themselves during the initial introduction of the scenario during the game.

The summary should consist of three to four concise bullet points covering:

- the role of technology in the scenario,
- the general organizational culture,
- the role of leadership, and
- the key leadership challenges created by the scenario.

Creating an Immersive Audio Introduction

To maximize participant engagement, we recommend designing the scenario introduction using somatic grounding and mental time travel techniques. These methods encourage participants to mentally place themselves in the future scenario, resulting in richer and more realistic discussions.

To simplify this process, we have provided a prompt at the end of this guide. Paste the prompt, together with a short description of your scenario, into the large language model of your choice. The generated text can either be read aloud by the facilitator at the beginning of the session, or converted into spoken audio using a voice synthesis tool.

Prompt:

“Based on the scenario description below, write an immersive narration (max. 500 words) that can be read aloud.

Begin with a short breathing exercise and invite the listener to imagine traveling into a possible future.

Describe the future from a second-person perspective ("you"), using vivid but natural language that engages the senses and helps participants mentally experience the setting.

Focus on the broader societal and organizational context rather than specific technologies. Build atmosphere by using calm, present-tense language with short, flowing paragraphs suitable for spoken narration.

Conclude by guiding the listener into a meeting room where other participants are already waiting, ready to discuss the next steps. End by inviting them to take one final breath and open their eyes.

Scenario:”
