

Questions of the Executive

1. To what extent does the use of the technology change the understanding of leadership and decision-making, possibly shifting it from humans toward systems?
2. What risks arise from the use of the technology, and who bears the responsibility for the consequences that result from it?
3. How do we ensure that the use of the technology adequately takes ethical, legal, and social implications (ELSI) into account?
4. How do we address potential tensions among our employees and stakeholders that may arise for social or cultural reasons?

Short Description: Scenario 1

- Automation and AI systems determine work processes, while humans take on tasks that machines cannot reliably cover.
- Everyday work is characterized by permanent adaptation, high pacing, and a tense atmosphere.
- Leadership is highly data driven and consists primarily of flexibly integrating people as resources into the rhythm of the machine system.
- The central challenge lies in providing orientation under extreme pressure for efficiency and change, even though roles, teams, and requirements are constantly shifting.
