

Questions of the Executive

1. To what extent does the use of the technology change the understanding of leadership and decision-making, possibly shifting it from humans toward systems?
2. What risks arise from the use of the technology, and who bears the responsibility for the consequences that result from it?
3. How do we ensure that the use of the technology adequately takes ethical, legal, and social implications (ELSI) into account?
4. How do we address potential tensions among our employees and stakeholders that may arise for social or cultural reasons?

Short Description: Scenario 5

- Information technologies are used for the massive spread of contradictory reports, targeted narratives, and to influence public opinion.
- Everyday life is characterized by a fragmented society, eroding trust in institutions, and an atmosphere of uncertainty and internal instability.
- Leadership must remain capable of acting in an environment of external uncertainty while simultaneously working actively to restore trust internally.
- The main difficulty is making decisions, despite constantly changing information, that maintain the external position and prevent internal division.
