

Questions of the Executive

1. In which situations does decision-making power shift from humans to technical systems, and in which should it intentionally remain human?
2. What risks arise from the use of the technology, and who bears the responsibility for the resulting consequences?
3. How do you ensure that the use of the technology is consistent with ethical principles, legal requirements, and organizational values, and where might potential conflicts of interest arise?
4. How does the implementation of the technology alter the dynamics of both internal and external conflicts?

Short Description: Scenario 5

- Information technologies are used for the massive spread of contradictory reports, targeted narratives, and to influence public opinion.
- Everyday life is characterized by a fragmented society, eroding trust in institutions, and an atmosphere of uncertainty and internal instability.
- Leadership must remain capable of acting in an environment of external uncertainty while simultaneously working actively to restore trust internally.
- The main difficulty is making decisions, despite constantly changing information, that maintain the external position and prevent internal division.
